South Africans continue to get poorer

The economic chickens of the past few years are starting to come home to roost. This is reflected in the very low (sometimes negative) rates of economic growth which South Africa has had over the last few years, with the average South African poorer in 2020 than they were in 2005. In addition, the overall size of the South African economy was smaller in than it was in 2013.

In 2005 all nine provinces, bar one, had economic growth rates of above 4%. In 2019 the highest rate of economic growth was in Gauteng – at 0.6%.

While 2020 was a unique year, with the economic shock of the Covid-19 pandemic coupled with the resultant economic catastrophe of lockdowns South Africans had been getting poorer, on average, since the early part of the 2010s. This was after a long period of economic growth.

The cause for this can be directly linked to ANC economic policies. After it came to power economic policy followed by the ANC was pragmatic. It focused on encouraging inward investment and resisted the urge to spend more money than the government earned in revenue. This soon paid off – in the first decade of this century economic growth was averaging around 5%. This economic boom saw unemployment decline and South Africans, on average, were becoming more prosperous.

However, in 2008 Thabo Mbeki was voted out as ANC leader, and Jacob Zuma became head of the party, and president of the country the following year. The relatively pragmatic economic policy programme of Mbeki and others, such as Trevor Manuel, was jettisoned, in favour of high government spending and policies unfriendly to business, investment, and job creation.

The results of these policies are now becoming apparent. South Africans are poorer with many of those who have the means seeking to move abroad. At the same time, frustration is mounting with social unrest, often violent, becoming increasingly commonplace.

Unfortunately, without an immediate U-turn or change in government this is unlikely to change. The country and its citizens will continue to become poorer.

— Marius Roodt

a The gross domestic product (GDP) is the total value of all 'final' goods and services, that were produced within the borders of the country, during a year.

b At constant 2015 prices.

c GDP per head is total GDP divided by the total population.

d Real disposable income per capita is total personal income minus direct personal tax plus subsidies.
