## FreeFACTS

## Some successes in education but challenges remain

A well-functioning education system is one of the cornerstones of any successful society. When viewed through the lens of education can we say South Africa is successful?

This may surprise some but the answer is a mixed one.
This edition of FreeFACTS looks at a number of educational statistics. Like a number of developmental figures in South Africa the ANC government made some progress since the end of apartheid.

The number of people who have completed Grade 12 or have some form of tertiary education has grown rapidly in the last nearly 30 years. In addition, the proportion of people who pass matric well enough to secure entrance to university has also risen rapidly.

However, there are serious questions about the quality of education that people at South African schools receive. This is reflected in the explosion in the number of private schools and in the number of children attending these schools. This would imply that many people are seeking to educate their children outside of the state school system, because of a variety of concerns.

There are also worrying differences in outcomes between black and white children at school, which is likely a reflection that white children will - in general - attend a well-resourced government school - a so-called former 'Model C' school. While many black children attend former Model C schools (which were reserved for whites during apartheid) the proportion of black children attending these schools will be lower than the proportion of white children at these schools.

Furthermore, there are also serious questions around throughput. For example, of the 1.1 million children that started Grade One in 2010, less than half passed matric in 2011. In addition, less than a quarter did so well enough to go to university.

The South African education system has had some successes, but faces serious challenges. New ideas need to be introduced, such as education vouchers, and the power of the teachers' unions need to be curtailed. If this does not happen South African children will be doomed to a life of penury.

- Marius Roodt

## JOIN US

The IRR is an advocacy group that fights for your right to make decisions about your life, family and business, free from unnecessary government, political, and bureaucratic interference. FreeFACTS publishes evidence that communities are better off when individuals are free to make decisions about how they want to live, be educated, work, access healthcare, think, speak, own property, and protect their communities. If you agree with the issues we stand for, welcome to the team. There are millions of people just like you who are tired of South African politicians, activists, and commentators attempting to rein in your freedom to decide. Take control and make sure your voice is heard by becoming a friend of the IRR.
